Cafoli™
LIFECARE

Azathipair-100
Tablets

Azathioprine I.P. 100mg

Immunosuppressive Action
Azathioprine suppresses abnormal immune responses to prevent organ rejection.

Prevents Organ Rejection
Essential in prevention of rejection after transplantation and in autoimmune disorders.

Effective & Reliable
Clinically proven efficacy for long-term management of immune-mediated conditions.

Steroid-Sparing Effect
Allows reduction in corticosteroid dose while maintaining disease control.

Well Tolerated
Generally well tolerated with a favorable safety profile in long-term use.

Supports Long-Term Remission
Helps maintain remission and improves long-term patient outcomes.

Indications

- Organ Transplantation
- Autoimmune Disorders
- Inflammatory Bowel Disease
- Rheumatoid Arthritis
- Hematologic Disorders
