Critsila™

Bortedin 2 Injection

Bortezomib Injection I.P. 2mg/vial

Key Benefits

Potent Anticancer Activity

Bortezomib is a proteasome inhibitor that induces apoptosis in cancer cells and inhibits tumor growth.

Effective in Multiple Myeloma

Approved for the treatment of multiple myeloma, both in newly diagnosed and relapsed patients.

Improves Treatment Outcomes

Enhances response rates when used in combination with other chemotherapeutic agents.

Versatile Clinical Use

Also used in mantle cell lymphoma and other hematologic malignancies with proven efficacy.

Well Tolerated

Manageable safety profile with overt benefits in survival and quality of life.

Composition :-

Bortezomib	**I.P.**	**2mg.**

Indications

Multiple Myeloma | Mantle Cell Lymphoma | Relapsed / Refractory Hematologic Malignancies
