Critsila™

Cytrim 500 Injection

Cytarabine 500mg/5ml

Potent Antineoplastic Activity

Cytarabine is a pyrimidine analog that inhibits DNA synthesis, effectively targeting rapidly dividing cancer cells.[1]

Effective in Hematologic Malignancies

Widely used in the treatment of acute myeloid leukemia (AML) and other leukemias.[2]

CNS Penetration

Demonstrates activity in the central nervous system when administered intrathecally.[3]

Versatile Administration

Suitable for intravenous, intrathecal, and subcutaneous use for flexible treatment approaches.

Enhances Remission Rates

Improves remission outcomes in combination chemotherapy protocols for AML.[4]

Established Clinical Efficacy

Proven efficacy and safety profile backed by decades of clinical use and research.[5]

Indications

- Acute Myeloid Leukemia (AML)
- Acute Lymphoblastic Leukemia (ALL)
- Leptomeningeal Metastasis
- Lymphoma
- Myelodysplastic Syndromes (MDS)
