Information For the Use of
Glycopyrronium (25mcg) Respule

Glycoplit 25 Respule

Glycoplit 25 Respul

Composition:

Each respule contains:

- **Glycopyrrolate** – 25 mcg

Pharmacological Action:

Glycopyrrolate is a **long-acting muscarinic antagonist (LAMA)** that produces bronchodilation by blocking the action of acetylcholine on muscarinic receptors in the airways.

- **Bronchodilation:** Blocks M3 muscarinic receptors on bronchial smooth muscle, causing relaxation and widening of the airways.
- **Reduced Airway Resistance:** Helps improve airflow and reduce bronchoconstriction.
- **Reduction in Mucus Secretion:** Anticholinergic activity may reduce excessive airway secretions.
- **Prolonged Action:** Provides sustained bronchodilator activity when administered regularly.

Indications:

Glycoplit 25 Respul is indicated for the **maintenance treatment of airflow obstruction** associated with:

- **Chronic Obstructive Pulmonary Disease (COPD)**
- **Chronic Bronchitis**
- **Emphysema**
- Other chronic obstructive airway conditions, as prescribed by a physician

---

Dosage and Administration:

- **Recommended Dose:** Use **1 respule once daily**, or as directed by the physician.
- The respule is intended for **oral inhalation through a suitable nebulizer**.
- Do not swallow the solution.
- Do not inject the contents.
- Open the respule immediately before use and transfer the prescribed contents to the nebulizer chamber.
- Use the nebulizer according to the manufacturer's instructions.

- Do not mix with other nebulizer solutions unless specifically directed by the physician.
- Glycopyrrolate is intended for **regular maintenance therapy and is not a rescue medicine for acute bronchospasm**.

Precautions:

- For **inhalation use only**.
- Avoid accidental contact with the eyes, as glycopyrrolate may cause **eye pain, blurred vision, or worsening of narrow-angle glaucoma**.
- Use cautiously in patients with **narrow-angle glaucoma**.
- Use cautiously in patients with **urinary retention, bladder-neck obstruction, or prostatic enlargement**.
- Anticholinergic effects may cause **dry mouth, constipation, urinary difficulty, or blurred vision**.
- Patients with severe or worsening breathing difficulty should use an appropriate rapid-acting rescue bronchodilator and seek medical attention.
- **Pregnancy and Lactation:** Use only when clearly indicated and under medical supervision.

Contraindications:

- Known hypersensitivity to **glycopyrrolate or any component of the formulation**.
- Not intended for treatment of **acute bronchospasm or status asthmaticus**.
- Use is generally avoided or requires specialist assessment in patients with significant **narrow-angle glaucoma or urinary retention**.

Adverse Reactions:

Common:

- Dry mouth
- Cough
- Throat irritation
- Constipation
- Headache
- Nausea

Less Common but Serious:

- Urinary retention
- Increased intraocular pressure or acute angle-closure glaucoma
- Palpitations or tachycardia
- Paradoxical bronchospasm

- Hypersensitivity reactions

Seek immediate medical attention for sudden eye pain with blurred vision, inability to urinate, severe palpitations, or worsening breathing difficulty.

Drug Interactions:

- Other **anticholinergic medicines** may increase the risk of dry mouth, urinary retention, constipation, glaucoma, and other anticholinergic adverse effects.
- Other inhaled bronchodilators may be used concomitantly only according to the prescribed treatment regimen.
- Medicines with significant anticholinergic properties, including some antihistamines and tricyclic antidepressants, may increase anticholinergic effects.
- Inform the physician about all prescription medicines, OTC medicines, and supplements being used.

Storage:

- Store in a cool, dry place according to the **manufacturer's approved storage conditions**.
- Protect respules from direct sunlight and excessive heat.
- Keep unused respules in their original packaging.
- Use immediately after opening.
- Keep out of reach of children.

Note:

This information is intended as a general prescribing guide. **Glycoplit 25 Respul should be used under the supervision of a registered medical practitioner and with correct nebulizer technique.**

Important: Glycopyrrolate is a **maintenance bronchodilator and is not intended for rapid relief of acute bronchospasm**. Avoid allowing the nebulized solution to enter the eyes, particularly in patients at risk of narrow-angle glaucoma.
