ONCOKRIPT™
Oncology Care Medicines

Melophit 5

Tablets

Melphalan 5 mg

EFFECTIVE ANTINEOPLASTIC ACTION
Melphalan is an alkylating agent that helps in the treatment of various hematologic malignancies.

TARGETS CANCER CELLS
Works by cross-linking DNA strands, inhibiting cancer cell replication and inducing cell death.

PROVEN CLINICAL EFFICACY
Extensively used in conditioning regimens for bone marrow transplantation with established outcomes.

WELL TOLERATED
Generally well tolerated when used at recommended doses with manageable side effects.

SUPPORTS BETTER OUTCOMES
Helps improve patient response rates and overall survival in eligible patients.

Indications

- Multiple Myeloma
- Chronic Lymphocytic Leukemia (CLL)
- Ovarian Carcinoma
- Bone Marrow Transplant Conditioning
- Non-Hodgkin Lymphoma
