Description:
Oxcelzine 300 Tablet contains Oxcarbazepine, an antiepileptic (anticonvulsant) drug used primarily in the treatment of epilepsy. Indications:

• Generalized tonic-clonic seizures
• As adjunctive or monotherapy in epilepsy management

Mechanism of Action:
Oxcarbazepine works by blocking voltage-sensitive sodium channels in neuronal membranes, stabilizing hyperexcited neural membranes, inhibiting repetitive neuronal firing, and reducing synaptic impulses. It exerts its antiepileptic effect mainly through its active metabolite (licarbazepine).

Dosage and Administration:
Dosage should be individualized based on patient age, weight, renal function, and seizure control.
Recommended starting dose in adults: 300 mg twice daily, which can be increased in increments based on response.
Tablets should be swallowed whole with water, preferably at the same time each day.

Precautions:
