XURGEN™

Raslone 0.5

Tablets

Rasagiline 0.5mg

Selective MAO-B Inhibition

Rasagiline selectively inhibits MAO-B, increasing dopamine levels in the brain[1]

Enhances Dopamine Activity

Enhances dopamine transmission for improved motor control and reduced "off" time[2]

Neuroprotective Potential

May help protect dopaminergic neurons and slow disease progression[3]

Once Daily Convenience

Long half-life allows once-daily dosing for better compliance[4]

Improves Daily Functioning

Helps improve overall functioning and quality of life in Parkinson's disease patients[5]

Well Tolerated

Generally well tolerated with a favorable safety profile[6]

Indications

- Parkinson's Disease
- Bradykinesia & Rigidity
- Improves Motor Function
- Reduces "Off" Time
- Neuroprotection
